

**NATURAL RESOURCES CONSERVATION SERVICE
CONSTRUCTION SPECIFICATIONS**

WATERSPREADING

1. Scope

The work shall consist of the construction by cutting, filling, and grading operations for the complete installation of the waterspreading system as outlined on the construction plans.

2. Location

The system shall be installed as staked in the field and specified on the construction plans.

3. Excess Water Removal

Excess water will be diverted or returned to the stream channel as indicated on the construction plans.

4. Diversion Works and Conveyance System

The diversion works and conveyance system will be installed to divert streamwater onto the spreading area as shown on the construction plans--automatic or manual control.

5. Ditches, Dikes, Diversions, and Related Structures

Ditches, dikes, diversions, and related structures will be arranged and installed as staked in the field and as specified on the construction plans.

6. Measurement

Measurement will be as shown on the specifications for the specific related practice or as stated in the "Construction Details" Section.
